

Instructions – PMB-01-3005

Thank you for your purchase! We are confident that you will be pleased with the quality of our product.

Parts List:

1-Kickstand

1-8x30 FH

1-8x25 SH

NOTE: We recommend using a thread-locking agent on all bolt threads.

To install your new kickstand:

1. Remove the stock kickstand and all kickstand brackets and stops, if applicable.
2. Remove the sub-frame to main-frame bolt.
3. Install the kickstand on the bike using the 8x25mm socket head bolt at the lower mount location.
4. Line up and install the 8x30mm flat head bolt into the upper mount. Make sure there is proper clearance on the length of all bolts.
5. Tighten all bolts to the correct torque as specified in your owner's manual.
6. Rotate kickstand through its entire travel to check for clearance prior to use.
7. Periodically check the kickstand leg pivot bolt and all mounting bolts for tightness.

To prevent damage:

- Clean and lubricate the kickstand pivot area after each ride! We recommend using a penetrating lube, such as WD-40. If necessary, you can remove the back cover plate for additional cleaning.
- Carefully position kickstand up and down.
- Do not start/sit on bike with the kickstand down.
